

OPM 485 : Project Risk Management

This course introduces essential analytical techniques to manage business management issues with focus on project risk management. The concepts and the theories of risks management are discussed together with management models and their adoption. The course will present the full life cycle of risk management including risks planning, identification, analysis (qualitative and quantitative), response strategies, monitor and control, and overall risk governance approach. Business cases and tailored exercises are used for hands-on exercises to enhance students' learning and experience.
