

AMB 5X2 : Ambulatory Care

The ambulatory care clerkship course is designed to offer students a comprehensive overview of the important ambulatory and primary healthcare specialties. Through this clerkship course, students rotate between three specialties: anesthesia, emergency medicine, and family medicine. Students spent one week in anesthesia, three weeks in emergency medicine, and four weeks in family medicine. Through their rotations, students are exposed to the common diseases managed in these specialties and primary health care, their management, related examinations, and procedures.
